

ABOUT THE MAIN INITIATIVES

We're working on five projects aimed at creating enhanced data tools for identifying citizens' unique needs and connecting them to appropriate services and resources that would matter to them:

Digital Fredericton – Connecting customers to information and services they need, enabling an extraordinary experience of Fredericton through e-government services and the enablement of online collaboration & participation from the public & community stakeholders.

Doorable (developed by Appdigenous) – Addressing participation and independence of people with mobility limitations through an app that will wirelessly open doors, map the accessible city, and allow users to communicate about accessibility issues in the community.

Road Home Digital Platform – Helping to reduce the costs of homelessness and reduce the need for individuals to re-tell their story to multiple service providers through enabling a common data platform for homeless-serving agencies.

Non-Profit Data Collaboration – Working with non-profit organizations to enable community-wide engagement in the use of data to more effectively address community problems and better improve service delivery, program design, and influence policy development.

Digital Community Hub – Developing detailed, up-to-date information and data about and for people in the community and their unique “Big Issue” to connect people from all population segments with the services/support they need.

Each of the pilot projects is designed to address our challenge statement:

My city does not recognize me or connect me to what matters most; Fredericton will collaborate with First Nations to create an accessible, welcoming, supportive city for youth, newcomers, and an aging population, empowering everyone with a Personalized Inclusion Plan that connects people to create an exceptional quality of life.
